

ABSTRACT

A stackable cleaner or product applicator is described in which a rigid applicator body has a downwardly opening compartment surrounded by a skirt and an upper compartment surrounded by an upwardly extending wall, the upper compartment containing a foam body and fluid or gel and being closed by means of a removable top wall fixed to the top periphery of the upwardly extending wall. The downwardly extending skirt is sized to accept the upwardly extending wall of an identical unit whereby multiple units may be stacked in a nested configuration.
